

Deh-P8400Mp Manual

DEH-P8400MP

Important symbols for good service

In this manual, the symbols below indicate that adjustments, settings or cleaning should be made securely. When you find the procedure bearing any of the symbols, be sure to follow them.

1. Product safety

You should conform to the regulations governing the product safety, radio and noise, and other regulations, and should keep the safety during servicing by following the safety instructions described in this manual.

2. Adjustments

To keep the original performance of the product, optimum adjustments or specification conformity is indispensable. In accordance with the procedure or instructions described in this manual, adjustments should be performed.

3. Cleaning

For optical pickups, lens, disk heads, lenses and mirrors used in projection monitors, and other parts requiring cleaning, proper cleaning should be performed to restore their performances.

4. Shipping mode and shipping boxes

To protect the product from damage or failure that may be caused during transit, the shipping mode should be set or the shipping boxes should be sealed before shipping out in accordance with this manual, if necessary.

5. Lubricants, glue, and replacement parts

Appropriate applying grease or glue can maintain the product performances. But improper lubrication or applying glue may lead to failure or trouble in the product. By following the instructions in this manual, be sure to apply the specified grease or glue to proper portions by the appropriate amount for replacement parts or both, the specified ones should be used.

CD Player Service Precautions

1. For pickup unit (CXK1500) handling, please refer to "Disassembly" (see page 43). During replacement, handling precautions shall be taken to prevent an electrostatic discharge/protection by a jump capacitor.
2. During disassembly, be sure to turn the power off since an internal IC might be destroyed when a connector is plugged or unplugged.
3. Please check the grounding after changing the service pickup unit (see page 43).

A kormánytav kapcsolása A Pioneer radio távirányítása A kormánytav ellenállásait egy 470 Ohmos ellenálláson keresztül a tápra kötöttem, a másik felet földre. Az így kialakult feszültségosztót a PIC analog bemenetere kötöttem. Minden gombnak 3 funkciója van, a sima gombnyomás, a dupla gombnyomás és a nyomvatartott gomb. Pioneer AVIC F700BT fejegység szoftver helyreállítása Sziasztok! Javítanék egy ilyen AVIC F700BT navigációs fejegységet. Azzal hozták hogy nem jön be kép, csak a gombok világítanak. Mivel merésre minden jonak tunt, megpróbáltam a gyártói szoftverfrissítést. Az SD kártyára rairtam az adatokat ahogy javasolta a terméktámogatás, és frissítettem a WIN CE rendszert. Ezután már bejött a kijelző hatterfenye, de se bejelentkező kép, se rado, se dvd lejátszó nincs csak a menu gombra bejön a beállítás menu képet csatolok róla ebben lehet lepkedni is és ahogy kilepek a menuból újra az úresseg fogad. A navi gomb megnyomásakor bejön a figyelmeztető szöveg hogy vezessek óvatosan vagy valami hasonló és az okra kattintva már semmi sem történik csak az ok gomb színe változik. Minden kezelőszerv jó, van totalcommander is lehet másolgatni a fájlokat. Találtam rá módolt szoftvert, azzal a bekapcsoláskor lehet nyelvet váltani is és a navigáció nyelve is választható aztán itt is jön a szurkeseg. Elore is köszönöm! Joco Pioneer autoradióba PAL012A ICt keresek Sziasztok. Egy Pioneer DEH1600UB autoradióba keresek PAL012A végfok ICt. A régi csont zárlatos. A SINInél van, horror aron, az egész készülék nem ér annyit. Ha valakinek volna bontásból, vagy helyettesítőt tudna sokkal olcsóbban, megköszönöm. Udvozzellett Attila Similar manuals You can write in English language into the forum not only in Hungarian. But improper lubrication or applying glue may lead to failures or troubles in the product. By following the instructions in this manual, be sure to apply the prescribed grease or glue to proper portions by the appropriate amount.

For replacement parts or tools, the prescribed ones should be used. 4. Symbol indicates a capacitor. No differentiation is made between chip capacitors and discrete capacitors. No differentiation is made between chip resistors and discrete resistors. Symbol indicates a capacitor. No differentiation is made between chip capacitors and discrete capacitors. The signal reference potential, therefore, is connected to REFO approx. 65V instead of GND. If REFO and GND are connected to each other by mistake during adjustments, not only will it be impossible to measure the potential correctly, but the servo will malfunction and a severe shock will be applied to the pickup. To avoid this, take special note of the following. Do not connect the negative probe of the measuring equipment to REFO and GND together. It is especially important not to connect the channel negative probe of the oscilloscope to REFO with the channel 2 negative probe connected to GND. Since the frame of the measuring instrument is usually at the same potential as the negative probe, change the frame of the measuring instrument to floating status. If by accident REFO comes in contact with GND, immediately switch the regulator or power OFF. Always make sure the regulator is OFF when connecting and disconnecting the various filters and wiring required for measurements. Before proceeding to further adjustments and measurements after switching regulator ON, let the player run for about one minute to allow the circuits to stabilize. 2 Test Mode This mode is used for adjusting the D mechanism module of the device.

Test mode starting procedure Reset while pressing the 4 and 6 keys together. Test mode cancellation Switch A, backup OFF. After pressing the EJECT key, do not press any other key until the disk is completely ejected. Jump operation of TRs other than 00TR continues after releasing the key. RG move and 00TR jump operations are brought into the Tracking close status when the key is released. The RFI and RFO signals are easy to oscillate because of a wide band. This equipment will not guarantee the load ejection operation when the mechanical unit is turned upside down. The PU unit in the D mechanism module is adjusted on the production line to match the D mechanism module and is thus the best adjusted PU unit for the D mechanism module. However, if the PU unit must be changed, the grating should be checked using the procedure below. Purpose To check that the grating is within an acceptable range when the PU unit is changed. Symptoms of Maladjustment If the grating is off by a large amount symptoms such as being unable to close tracking, being unable to perform track search operations, or taking a long time for track searching. Refer to the photographs supplied to determine the phase angle. 5. If the phase difference is determined to be greater than 75 try changing the PU unit to see if there is any improvement. If, after trying this a number of times, the grating angle does not become less than 75 then the mechanism should be

judged to be at fault. The angle specified above indicates the average angle. This arrangement is intended at reducing nonsense calls from the users and also for facilitating trouble analysis and repair work in servicing. Basic Indication Method When SERRORM is selected for the SMOD D mode area for the system, error codes are written to DMIN minutes display area and DSE seconds display area. The same data is written to DMIN and DSE. DTNO remains in blank as before.

2 Head unit display examples Depending on display capability of LD used, display will vary as shown below. SERVO LSI on RG cant be moved from inner diameter. Electricity Focus Servo NG Focusing not available. Stains on rear side of disc or excessive vibrations on REWRITABLE. 2 Electricity Spindle Lock NG Spindle not locked. Subcode is strange not readable. Subcode NG Failure on spindle, stains or damages on disc, or excessive vibrations. A disc not containing DR data is found. Turned over disc are found, though rarely. D signal error. 7 Electricity Setup NG AG protection doesnt work. Focus can be easily lost. Damages or stains on disc, or excessive vibrations on REWRITABLE. 30 Electricity Search Time Out Failed to reach target address. Defective loading motor, mechanical lock and mechanical sensor. A0 System Power Supply NG Power VD is ground faulted. Failure on SW transistor or power supply failure on connector. Remarks Mechanical errors are not displayed because a D is turned off in these errors. Unreadable TO does not constitute an error. An intended operation continues in this case. Upper digits of an error code are subdivided as shown below x Setup relevant errors, 3x Search relevant errors, Ax Other errors. 55 56 New Test Mode SD plays the same way as before. If an error such as off focus, spindle unlocking, unreadable subcode, or sound skipping occurs after setup, its cause and time occurred in absolute time are displayed. During setup, operational status of the control software is displayed. Subcode was unreadable for 500 msec. Last address memory function was activated. Note Mechanical errors during aging are not displayed. 56 57 4 Display of Operational Status during Setup Status No. Disconnect the connector and then remove the D Mechanism Module. D Mechanism Module Fig.2 59 60 Moving the Arm Unit position Fig.3 Arm Unit Use the finger. When you place a product, please go in the LOSE POSITION. Gear Unit Fig.6 heckpoints for the Gear Unit.

When you disassemble or assemble the Gear Unit, do so with the Arm Unit in the LOSE POSITION. Make sure that the Arm Unit is in the LOSE POSITION by seeing the other side of the unit through the fully circular hole shown in the figure. Gear Unit R 2 2. When you install the motor, fix the screws holding the motor in the direction of the arrow shown in the figure. Gear Unit L 6 62 Removing the Tuner Amp Unit Fig.7 There are two ways of removing the Tuner Amp Unit. Remove the two screws. Apply hot air to the cable pins for the anode terminal using blower used for removing a flatpackaged I or somethin like that. At this time, the stress is prevented from hanging to flexible cable in the athode terminal. Fig.9 4. The athode terminal is removed according to the procedure same as the Anode terminal, and the OEL Unit is removed. Fig.9 5. Remove the Holder. Remove after removing the athode terminal without fail. Fig.9 Installing the OEL Unit. Install the Holder in the OEL Unit. Fig.0 2. When soldering the flexible cable for the athode terminal on the PB, use a pair of tweezers. Then, take the same procedures 2 and 3 as that for the athode terminal to solder the cable pins. Fig.8 Fig.0 63 64 How to hold the Mechanical Unit. Hold the top and bottom frame. 2. Do not squeeze top frames front portion too tight, because it is fragile.
